I am using this ISAPI dll. It works great as any other expensive applications. The most important thing is the support. Author of this application available online anytime and he helps anybody without any hesitation.

I really like the performance of this application and unbelievable support.

Heartly Thanks to the Author of this application.

Works really well, actually better than a lot of expensive components. Quality instructions come with it.

I wish I could give it more than 5 stars!

**Imager.dll works great with many different jpeg versions.**, Jan 21st, 2007

I was using a different image resizer that was resizing images but blurring the image if it didn't get re-exported from photoshop or fireworks. Thats right I had to take my camera copy the image to my computer load it into fireworks or photoshop and re-export it. The imager.dll fixed all this it now works great. Love it!
