# phpMySQLAutoBackup - automate your MySQL backup using php

Hits: 11,157

**Description:** NOW released under GPL License.

phpMySQLAutoBackup the simple way to backup MySQL databases - automates the backup of your MySQL databases. Exports your database (data and structures), compresses it into gzip format and emails it to you. Schedule it to run every day/week by adding it to a cron job, or use phpJobScheduler.

New features include the ability to select separate tables for backup, and limit the backup to start and stop at pre-set table row numbers, this will now allow a section of a large table (with millions of records) to be selected for backup.

## Features:

- \* email zipped database to your specified address
- \* option to save to backup folder
- \* backup limited to once per hour (easily changed) prevents malicious attempts at bringing down your server
- \* specify specific tables to backup or backup the whole database
- \* set ranges to backup - from start row number to last specified row number

## Resource Specifications

<b>Version:</b>	1.4.0
<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Price:</b>	freeware
<b>Date Added:</b>	Jul 16th, 2004
<b>Last Updated:</b>	Dec 18th, 2007
<b>Author:</b>	DWalker.co.uk

**Couldn't be simpler, finally a reliable MySQL backup script, Oct 7th, 2004**

Reviewed By: aopchuck

I've tried several MySQL backup scripts and never been satisfied -- until I downloaded this one. It's too simple. I just plugged in my login info and it ran first time, and every time. I run it from a cron job, and sleep better knowing that each night all my data is automatically emailed to me and I can reconstruct it all without a hitch. Other programs garbled the sql of the backup. Not this one. Get the picture? If you've got crucial data, download this script and rest easier knowing you've got backup.
