## PHP text hit counter

Hits: 10,804

**Description:** PHPcount is a simple yet effective PHP text hit counter. It uses flat-text database so no SQL databases are necessary. It can count hits for multiple pages of your website or even websites on other servers. It can be configured to count unique visits only. The count is displayed on the page using a simple Javascript code. The script prints out only the number (i.e. 15344) which you can easily format with HTML code. You can use one copy of the script to count hits on multiple pages.

**php counter 1.0**, Aug 23rd, 2005

Reviewed By: barney1

Downloaded, installed following instructions. Worked perfectly. simple and effective, can count many pages with just the one script. thanks.

**Very simple and good counter**, Apr 6th, 2007

This works very well, you can add the counter to several pages with just one script and you can easily hide it from visitors.

However you should change the script used to add the counter from:

```
<SCRIPT LANGUAGE="Javascript" SRC="http://www.domain.com/counter/counter.php?pag e=PAGENAME"><!--  
!--></SCRIPT>
```

to:

```
<script type="text/javascript" SRC="http://www.domain.com/counter/counter.php?pag e=PAGENAME"><!--  
!--></script>
```

if you want it to pass W3C validation.

**Very easy! Worked the first time, no problems. Impressive!**, May 12th, 2007
