## GBook PHP guestbook

Hits: 40,729

**Description:** With this script you can setup a guestbook for your site. No MySQL database is required to run this script. It supports smileys, email notification of new entries, message deletion, private posts and style customization.

GBook comes with a very powerful SPAM filter, e-mail protection against SPAM harvesters, IP banning and a bad words filter which will replace bad words with \*\*\*\*. You can easily modify the look by editing header/footer and style files.

Simple to install, little needs to be done to adjust appearance using stylesheet included or direct it to your own. Secured with spam protection to prevent automated posts. I am pleased with it's ease of use and the developers prompt reply and solution to my questions.

I've tried other scripts but I either couldn't understand them or found myself in mySQL editing table names.

I found thisguest book so easy I'm actually running two instances on my site. One for public viewing and the other as more of an email contact method for my visitors.

I know very little about php thus me being a member here and using "pre-packaged" codes. If you want or need a guestbook and you don't want to have to dig into dozens of reference books I would greatfully recommend this PHP Guestbook.

**This is great**, May 2nd, 2006

I have just started to use this after using Openbook for 2 years or so - that was fine but became impossible to manage once it was targeted by spammers.

This, however, is superb - anti spam, fairly simple to get up and running and the support is phenomenal.

There are regular revisions and suggestions are at least listened to. I can thoroughly recommend this - it certainly solved my problem - and the best part is, it can only really get better.

Use it - you won't be disappointed.

I've tried several guestbook scripts, they all failed the test for various reasons, I can write basic php, but am no expert. This one appealed to me because the author thought of just about everything, easy to customize, spam proof, and with a powerful "word block" feature that protects the guestbook from nasties, I recommend this to anyone who needs a non-database guestbook that is easy to install.

Needed a guestbook FAST for [www.36grayslane.co.uk](http://www.36grayslane.co.uk) and this fitted the bill almost perfectly.

Very easy to set up - was downloaded, setup and running within 20 minutes.

The spam filter was a little too sensitive but didn't have time to play with the settings.

Only bug was with admin replies and deletes, if someone posted while you were doing either the edit was applied to the wrong post. But with posts running at up to 80 an hour at times on the site, overall it coped brilliantly!
