php_db2util

Hits: 1,248

Description: At the moment, the php_db2util extension supports:

- *) connecting to DB2
- *) load data from client or server with replace option or insert option
- *) export data from table to client (also not possible with ODBC)
- *) run the runstats utility to recreate indexes (also not possible with ODBC)
- *) disconnect from DB2

Loads 2.000.000 rows in 10 minutes into a DB2 table!

All this functions returns the count of the written/exported/readed lines to the calling function. This extension will not replace the ODBC support to IBM DB2, it will extend it. Requirements: You must have installed the runtime client from IBM for accessing the API libs.

You can get the runtime client free as fixpack from the IBM website.

There is also a free developer version of DB2 8.2.

Resource Specifications

Version:	1.0
