# Willow Issue Tracking System

Hits: 4,440

**Description:** Issue tracker is a highly-customizable issue and task tracking system. It comes with powerful reporting capabilities, a security system to control what users can see and do, and a flexible filtering mechanism to control what appears in job listings. The pro version adds a custom field manager and a faq system to help you customize the system to suit your needs. It is MUCH nicer than bugzilla -- you should try it! Online demos available at the website.

## Resource Specifications

### **Installation only on root servers?**, Aug 7th, 2005

Reviewed By: Sinbadsurf

I tried to install it my shared hosting provider, where I do not have root access. It was not possible to install it there, cause the install script tries to write to the webroot, which fails, although the web based install wizard offers to specify the webroot, this was ignored. Also the smarty template engine is required by this application. This took also several time to install. It took me several HOURS and at the end I gave up :(((
