UnlimitedFTP Commander

Hits: 1,535

Description: UnlimitedFTP Commander is a full-fledged secure FTP client that works from the command line or a script file. UnlimitedFTP script files support all of the popular FTP commands to control the application. These include over 50 commands including login to a FTP server, change remote folders, update, replace or delete folders and files, as well as transfer files back and forth. UnlimitedFTP's script file can be invoked through a scheduling application to run at a predetermined time or an event trigger. This greatly helps to automate the operation of UnlimitedFTP Commander.

Resource Specifications

Version:	1.0.6
Platform(s):	linux, windows
