## BAD HARVEST Spam Protection

Hits: 757

**Description:** BAD HARVEST is a form-mail CGI script designed to be called from links similar to "mailto:...". It helps you to hide email addresses from "harvesters" (automated email-address collectors) while still providing a convenient way for your visitors to contact you. It does not rely on JavaScript or PHP and works in every browser down to text browsers.

### Resource Specifications

<b>Version:</b>	Beta
