ListMerge

Hits: 4,292

Description: ListMerge is a versatile FREE-to-use e-mail address list mail merge script compatible with "E-Lists" and "ennyForms" subscribed lists AND standard vertical text file lists. E-LISTS is excellent for allowing your visitors to register for upgrade notification, newsletter registration, new product reviews, price list updates, club updates etc etc. LISTMERGE allows you to create and save mailing texts for every list separately, and then manage the regular mailing to the registered recipients. E-Lists compatible, name, address, and registration date can be merged into the newsletter to give your mail-outs an added personal touch. Including some handy features that add flexibility to your list mailing needs ListMerge can send BOTH Text and HTML newsletters, imbed UN-Subscribe links in newsletters, and allow list members to change their newsletter format if their first preference was not suitable.

Resource Specifications
