LinkMachine

Hits: 8,428

Description: Full featured reciprocal link exchange manager software that makes it easy to find and contact quality link partners, generate custom link pages that match your site, and keep track of reciprocal links. As a site-based Php tool script, LinkMachine automatically updates your link pages the instant they're changed - no uploading required. Also includes SEO Wizard to compare your site with its competitors and provide specific advice on how to increase its rank; Link Analyzer to uncover useful information about all your site's incoming links; and Rank Tracker, to chart your site's progress in the search engines. Link exchanges increase a site's targeted traffic, search engine ranking, and sales. LinkMachine also supports non-reciprocal "three way" or "triangular" linking.

Resource Specifications
