# CyberFrogs.Net Gallery Script

Hits: 11,188

**Description:** Yet another gallery script...

I wrote this because I got tired of all of these other scripts that were hard to edit and had too many features I wasn't interested in. This is a simple picture indexing script that generates thumbnails on the fly. All you have to do is change a couple paths in the file to make it work. You can easily modify the table layout, specify the thumbnail size, and specify the displayed image size.

The code is well commented, so it should be easy to change anything you want.

Supports ImageMagick and GD/GD2

Resource Specifications	
<b>Version:</b>	.24
<b>Platform(s):</b>	linux, windows
<b>Date Added:</b>	Sep 9th, 2004
