A PHP Links Exchange Website Script

Hits: 1,949

Description: This link exchange script is a PHP script that allows your visitors to sign up for an account, and add their link to your website! It keeps track of all dead links on your website so that you can easily maintain your site, and keep dead links off of your link exchange! It also has an administration section that is password protected, and allows you to add categories, links, approve, disapprove, and delete links right from your browser! This would be a very nice script to start up a paid or free link exchange! Either way you win because Linking is the best way to get listed in the major search engines! MASTER Resale Rights Included!
