PSA Password Manager for Plesk Server Administrators Hits: 1,589

Description: New Years Special - was \$69.00 for Master License and \$39.00 for Remote License. For a limited time Master License is \$19.95 and Remote License is \$9.95

By default, Plesk Server Administrator (PSA) does not allow user passwords to be seen by the Server Administrator through the Plesk control panel. When a password is viewed through PSA it is seen as ***** and not XYZ123.

This can become a problem when supporting customers who have forgotten their passwords and trouble shooting technical issues that require the Server Administrator to know what the customer's password is.

PSA Password Manager solves this problem by remotely connecting through a browser session to each Plesk server that you are administrating and pulling the user names and the TRUE XYZ123 passwords for FTP, FrontPage, E-mail, Databases, and Sub-domains for the domain name in question.

PSA Password Manager also includes other helpful utilities like ping, who is, and auto-search for multiple server look ups. These utilities are integrated directly into the application so all of your administration can be conducted within the same browser session.

We have worked closely with the developers of this application, and they are very focused on ensuring it suit the needs of Plesk users. It is becoming an invaluable part of our day to day work maintaining our servers and supporting our clients. Very highly recommended.
