Creativyst (R) Perl Code Compressor

Hits: 742

Description: Creativyst's Perl Code Compressor (PCC) allows you to format and comment your Perl code liberally and then squeeze it all out of your distribution script. It also (optionally) changes the names of local variables and/or subroutines to further reduce module size. PCC reduces the amount of disk space needed for your scripts. It also makes your scripts more difficult for casual pirates to read.

Resource Specifications

Version:	0.1d
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Sep 28th, 2004
Author:	Dominic John Repici - Creativyst

Average Visitor Rating:  **0.00** (out of 5)
