MyGallery 1.2

Hits: 9,177

Description: MyGallery is a simple picture gallery presentation script that uses flat files for saving necessary data (no mysql database needed) with following features: automatic thumbnail creation & thumbnail page (if GD lib is installed), optional slideshow, foto captions, admin panel where you can create new galleries by uploading single pictures or whole ZIP archives (so you don't have upload photo by photo) and of course you can edit/delete existing galleries.

Handy little script, Oct 16th, 2005

Reviewed By: greatoz

If you're looking for a simple - yet effective - script, you really don't need to look any further than this one.

It makes a small footprint on your server, taking up very little room and not requiring a truckload of resources to work. It's easy to set up and once it's going is pretty effortless to use. And there's no need to set up a database with this script.

This author has several scripts available and I would recommend all of them.

Excellent easy to use gallery, Jun 17th, 2007

Reviewed By: Jagabot

If you're looking for a gallery solution that is easy enough for even your CEO, VP or even somebody from marketing to use (yes, it's that easy) this is that gallery. It has a simple upload method to add images to existing galleries, it's easy to add new galleries, it's easy to customize your own layout and presentation, allows you to include watermarks, it creates nice symmetrical thumbnails, doesn't require mySQL, and it's free! I too recommend just about any script at PlanetLuc. Good stuff!
