# Web Hosting Automation and Billing

Hits: 10,678

**Description:** Agileco's billing application for the SME is a stand-alone, web-based billing application that completely automates account registration and ordering, domain and web hosting management, automated invoicing, recurring billing, account management, commerce reporting, and newsletters. AgileBill supports unlimited themes, languages, and currencies. Supports over 30 payment processors for full order and invoice automation. Agileco's Web Hosting solution enables providers to configure hosting plans and integrates with the AgileBill billing application for instantaneous provisioning of hosting accounts on a wide array of web servers, as well as automated domain registrations via supported registrars. Also features optional affiliate, ticket management, content protection, and database mapping modules. Free downloadable trial version available.

We are now using this script over modernbill and to start off all I can say is wow. The script itself is very powerful yet very simple to use and a balance like that alone is very hard to accomplish.

There are a number of features that just make billing and account administration that much easier and some features that are longer overdue in other products are already in this script. At the moment we use the web hosting module and the connection with the server itself is very fast and very clean.

Overall I am amazed by the script and I am very pleased I came across it, its about time there was another script on the market and I can assure you this is one of if not the best.
