pPIM

Hits: 6,750

Description: pPIM is a personal information manager that can store contacts and their photos, events in a calendar, links, notes, send emails, check emails from unlimited email accounts, and upload files. A Must have, very user friendly, easy to install, and a great user interface to look like Windows Longhorn Contacts manager. Stores info in flat files so it does not require SQL.

Security holes need fixing before use, Oct 23rd, 2006

Reviewed By: wektis

If your not comfortable making your own .htaccess files then stay away or don't put any confidential or private information anywhere within this script!
Other wise the interface is clean and nice, and certainly has potential...just beware of the security flaws!
