Validator

Hits: 6,733

Description: Validator is a class containing common data validation routines. Using this class your programs can validate a wide variety of data types common to forms and the internet in general. Included with the various data validation routines are several common" string and array manipulation routines. In short, this is a class designed to conduct grunt work on submitted data. This version of Validator contains 19 data tests, 9 data manipulation methods, and one array debugging tool.
