Pixelpost Photoblog

Hits: 13,870

Description: If you're interested in setting up a photoblog this script might be for you. Heavily geared towards photobloggers, pixelpost comes with all the features that's been set as standard by the photoblogging community, keeping every level of photography skill in mind.

The setup is a breeze and you'll get going in no-time. The look is completely customizable with a simple template system. It's very easy to switch templates and to create one (it's only html and css) and many are available for download with instructions on how to customize things to your liking.

very, very interesting!, Feb 10th, 2005

Reviewed By: -okapi-

just downloaded the script and installed it on my local server.

and - wow...!

it comes straight, simple, customizable, clean, not overloaded, but with reasonable features, features that i like...

installation is as easy as it can be.

this amazing software creates only five tables in the database.

i don't know how it will work with a large amount of images, my current website contains now 561 images, i also don't know if there are security issues and bugs, but, as far as i can see, pixelpost looks very, very interesting!

Wonderful!!, Mar 22nd, 2006

Give it a try and you will be glad you did. A basic yet competent photo blogging system with a good forum and template base for free!

Quick, Simple, And Expandable, Aug 21st, 2006

I was looking for a photoblog script. But the ones that I found were very complex and used other more complicated blog software, such as MovableType and WordPress. I wanted something simple and fast. Then I found PixelPost. It was exactly what I wanted.

And to make it even better, you can install "addons" to give you extra features. All in all, I am very pleased with this software.
