Locked Area Lite

Hits: 28,935

Description: Locked Area Lite is a highly sophisticated password protection and membership/user management system written in Perl. It has been designed to be as secure as possible while it still runs hands-free with no input from the webmaster. It uses Apache's .htaccess and .htpasswd files along with DES randomised salt encryption of passwords for increased security. Includes a member's database that lets the administrator maintain a mailing list (with member's db data import) and tools to allow your member's to modify their account info, change password, remove account or request a new random password. Also includes a member's area statistics system which lets the administrator see which users are logging in most and view the top IP addresses, web browsers, referrers and usernames amongst others. Supports text-based or mySQL database.

Resource Specifications

This script is the only one we could find that does what we needed, not only has it got the power but it is also cheap, dont get us wrong, for the price you get a lot more than you would expect, support is also great, always getting answers within hours and not days, if your looking for a good automated system this is the one.

Perfect Solution, Mar 20th, 2005
