# TreeMenu

Hits: 22,071

**Description:** Explorer like navigation tree for websites with optional multilingual support for unlimited folding levels and items. All styles, formats and symbols can be customized, selected items may be highlighted. The script is directly executable, reliable and speedy to handle even more than thousand items. Multiple trees can be loaded in one document. Guests can request cookies to store the page layout. The code and the intuitive usage is well documented to aid novices. TreeMenu writes cross-browser compatible html-code into an usual html-document. So e.g. leading and trailing text, colors or code may be added to that document. Even a tree working without frames is imaginable. All customization can be done using a simple text-editor. No wizards are needed due to the clearly structured documentation and code. A public help-forum is provided. Nothing is hidden. Thus it's easy to enhance and update your site later.

**Great**, Nov 5th, 2004

Reviewed By: adpaul

I was searching a long time for a navigation script that is easy to understand and allows me to add some code due to my own needs. I nearly was despaired before finding treemenu. Even as inexperienced programmer i understood your commentated code in a glance. Because of the gentle html-code treemenu adds to the document, there was no more need for me to change the script, i did the changes in the document directly. A wonderful script. Thanks.

This script is just what i needed: Focusing the essentials, skipping the useless and extremely fast. OK, the documentation is very detailed and therefore time-consuming (calculate about 10 minutes) but it's a substantial help to use all included features. Users should be able to handle a text-editor and they should be interested in learning some explained details of html, css and js. They will be awarded with an outstanding and flexible script able to grow with the website it is used.
