RCBlog

Hits: 8,231

Description: RCBlog is a simple blog script that requires only PHP and write access. It stores all information in flat text files, so no database software is required.

Features include static posts, private notes, customization, full markup, uploads/file management, and automatic colorscheme generation.

This is an extremely customizable script with wonderful functionality. I wish more were like this.

Easy to Install and Use..., Dec 8th, 2004

Reviewed By: 7hunters

This script was effortless to install. As long as an user understands how to create files and set permissions they'll do fine. This script doesn't allow comments by other users but the nice navigation and sleek utility of the script is really enjoyable. It was very easy to change the colors in the admin area without having to mess around with .css style sheets. I give this script five stars. Great for novice users who want to start installing scripts.

not what i thought it would be, Dec 18th, 2004

like the title says, its not quite what it seems to be. its good for the very basic users that dont already have a website that they wish to implement a blog script into. i tested this on my apache server, acting as a user without much knowlege i followed the simple setup instructions. went to post and got an error "could not write to file". hmm. fortunatlly the code is cleanly written so i may be able to find whats up. actually nothing worked on my server so mabye its only for unix? also markup languages are not allowed when posting. this means no html in your post, instead your limited to the SMALL set of tags created by the author.

so in the end, if you dont know anything about html or php this script probly isnt for you. however, if you do know alot about both, this script is probly not for you.. considering you probly have created your own website that you wish to IMPLEMENT a blog script into. but, if your the middle ground and could care less for having your own unique website, this is probly for you.

hey at least the codes clean.
