## PG Newsletter Software

Hits: 10,279

**Description:** PG Newsletter Software is a complete software package that contains everything you need to start sending successful newsletters. This system is written in PHP and installs on your Web server. Thus, you don't need to rely on your ISP's mail server. You control everything via a Web front-end. The program features an unlimited number of mailing lists, advanced customization and statistics including link tracking. Whether you prepare a commercial newsletter, or you need to deliver some info to your company employees, or you are just planning to send a few jokes to your friends, a wrongly chosen e-mail program may cause the wrong content to go to the wrong recipients at the wrong time. Start sending successful newsletters!

**Don't purchase this program**, Nov 19th, 2007

Reviewed By: quantumweb

This program is full of errors and problems, do not purchase it. Pilot Group blame it on the server, and yet I have tried it on two servers that have other mailing systems on them and have no problems.

Purchasing this product from Pilot Group was a nightmare. From the sales process through to trying to get it to work it took three weeks, and still not resolved.

I now have different software for this purpose, which was installed in 15 minutes and it works perfectly with no problems.
