Dynamic Web Based File Manager

Hits: 24,993

Description: Omnistar Drive is a web file manager that will allow you to setup a secure file storage repository. Our web based file manager gives you the ability to create unlimited user accounts and give users custom permissions to various folders and files. Users permissions can also be customized in such as way as to allow them to have view, edit, delete or full rights to the file and folders that they upload. Our php file manager solution is entirely web based and can be used as an alternative to an FTP program.

The web file manager solution is also a private label software allowing webmasters to brand the product as their own and resell to their customers. Other features of Omnistar Drive private label web file manager include a built in java upload tool that will allow you to upload files of any size, an advanced document search feature and a document email feature allowing you to email a link to a document to anyone.

I bought it, so I'm stupid?!?, Jan 23rd, 2006

Reviewed By: Rhuggs

Well, paid the money, got the software, loaded it, and found that it's so restrictive that I had to end up removing it and demanding a refund. Then the refund took >60 days. It would be very nice for a business application, but not for personal use. As a business app, I rate this very high, explaining my rating here. Just if you're getting this for personal use, get one of the free file managers here.

Omnistar Drive was exactly what I was looking for!, Aug 5th, 2006

Reviewed By: davesmith

The Omnistar Drive document management product was exactly what I was looking for. I was easily able to create folders, add documents and create users and permission levels. I have setup an account for all my clients so that they now can easily have access to the files that I make available to them. I do not know what I would do without this product!!

needs work, Jun 14th, 2008

Reviewed By: jeremiah11

omnistar drive still needs some work. I purchased this product and could not get it working even though they installed it. They fixed a couple things after their incorrect install but it would not upload files over 150mb. As of right now it does not set permissions correctly with users as well as when i set a user to only see 1 specified folder, they could see others and download from others as well. They did state they were going to come out with a new release soon but it needs alot of work.
