Sooooo Slow, Oct 2nd, 2006

Reviewed By: Willy3000

I purchased this script two months ago and have seen nothing but problems. It's extremely slow and getting slower as I get more site users. The company acknowledges the problem and says that the problem is due to their packing of more features in the new version. I have never heard of such a stupid justification. It's clearly a case of poor coding. The low price is tempting but it's not worth the pains and sufferings.

Poor performance - not recommended!, Jun 27th, 2007

Our website became very slow after integrating Comdev scripts into our HTML files, even using the IonCube version. Some pages were taking more than 15 seconds to load, which made our visitors mad and never wanted to visit our site again.

Never buy or deploy encrypted PHP scripts in your site, or you'll regret.

If you care about performance and reliability, look somewhere else. ComDev scripts are not designed for serious or important websites!

Best news article out there., Jul 12th, 2007

I love the fact that I do not have to deal with those annoying smarty templates that every platform uses. This really cuts down design time and I am able to deliver a finished product to my clients in a fraction of the time it would normally take. Simply add an SSI and your done. Everyone should create modules like these.
