Unit Miner - Web Data Extractor

Hits: 8,144

Description: Unit Miner is robust, flexible and easy to use system for monitoring, retrieving and mining content from from web sites, documents, or any non-structured source of data.

Unit Miner provides the industry's best solution for data mining. This next-generation automated data mining solution deploys the concept of pattern matching to radically simplify scripts creation and maintenance.

Examples of use:

Online price comparisons, automatic stock market surveillance, personalised online news aggregations, parsing clean data from huge files, transforming information from one text format to other, etc.

Resource Specifications

I would like to leave a notice for others, which search for any flexible tool for grabbing data from websites, that we are very satisfied with this tool. We tried more similar tools, but this one seems to be the best one. Design of script definitions is easy and readable and also support team reacted on our questions very fast.

With this tool we saved much manual work which we used for updating data in our database from other partner's sites. With other tools we found difficulties to load contents from login protected areas or sites, which required cookies. This tool has no problems with it.

I would like to leave here just a notice, that UnitMiner is capable to be installed also as Distributed solution over more servers and more processes if you will reach limits of your server.

It's sold as special product Unit Miner - Distributed Server, which cost slightly more as single process version, but it's best solution on the market for retrieving huge amounts of data for that price.

In most cases is limitation of retrieving process internet connection. (When retrieving Gigabytes of data daily)

For this purpose can be Unit Miner distributed to more hosting servers with better internet connection.

Only requirement is, that each server will need to have connection to central MySql database, where are stored scheduling informations.
