X-Statistics

Hits: 13,309

Description: This script tracks how many visitors visit you site on a daily, monthly and yearly basis as well as finding out what browsers and operating systems they use. It also tells you how the visitors got to your website i.e. via a referer. With dynamic graphs to display the data (visitor hits and unique visits) you can easily see how popular your website is.

With this script you can also expect to see a small database. Unlike other scripts this doesn't simply just insert data after a visitor has visited, it cleverly updates the data resulting in the database size staying the same.

As with all our scripts it is 100% customisable and easy to do so too.

Does everything., Dec 25th, 2004

Reviewed By: phenom39363

Before this script I was using a combination of a few in order to get everything that this offers. It has referer tracking, os and browser tracking and displays all the data in graph.

Fantastic!

Good simple PHP stats script uses MySQL to store data, Jul 6th, 2007

Reviewed By: Diso

very simple to install.

Just upload, unzip, set DB settings, install,

remove 1 line from file, and include script into your pages and that is all.

I installed this script from uploading till working on all of my pages during 7 minutes.

Very good for real time statistics.

What could be better: hourly statistics of course.

Now I using this script on my sites.
