After using an earlier version of PHPRunner I am very pleased with it. In both it's earlier incarnation and with the small but effective enhancements made in version 2 I feel it is a very good program for the beginner (which I am) and also for the more experienced user who wishes to create a PHP script for testing quickly. For it's interaction with MySQL, which is what I primarily use if for I find it ideal for my needs and level of knowledge. It comes with a good help-guide and online tutorial also. Recommended.
