MyKazaam Guestbook + Photos

Hits: 2,389

Description: This script allows you to host a guestbook on your site, driven by a MySQL Database, that allows your users to upload a photo or image file with their entries. The photos' thumbnail images are displayed next to the text entry & hyperlinked to the full size image. The photos are scaled to thumb size proportionally and a thumb image archived for future display. You can also modify the listing order from decending to ascending. Forum support added with free GPL for install problems.

Easy Install, Basic Functionality and Great Extendability!, Feb 16th, 2005

Reviewed By: drbob1guru

Setup including MySQL db creation < 5 minutes. CHMOD fixed the only problem and it ran: The script allows a user to upload a photo with title and description. The image is stored and a thumbnail is created for displaying with the verbage. The administrator is notified.

Good malable code which I'm going to embed in an English bulldog forum for new litters. The breeder can upload photos of puppies with contact information. I've extended the database fields to include URL and Email of the poster.
