Hits: 1,485

**Description:** The near-OSX GUI modular publication and communication platform for Internet / Web developed in order to enable simple management of complex multimedia portals. It uses standard open-source software: PHP, Apache, MySQL and was developed in order to offer a simple and efficient applicative platform that could take in account the quality and diversity of today's multimedia, offering robustness and security for sensitive information management. It uses both Database AND file-system hierarchy for powerful online data-management.
