Simple Flat File Counter

Hits: 1,503

Description: New to PHP? This tutorial teaches you how to make a PHP Counter, without using MySQL, so if you do not have access to MySQL then you can still do it.

In the tutorial you will learn the basics of file handling and sessions, which are vital operations in most PHP scripts.

If you can't seem to crack it then I have added the full script at the end just incase.
