Powerful email address validation

Hits: 1,001

Description: Validating Email addresses is not limited to finding "@" and "." signs in the address! There are higher concepts, but few are aware of them. This article shows you a simple way to check if the Email address provided by a user is "real" to a higher extent than current famous validation codes do.

Resource Specifications

Platform(s):	linux, windows, freebsd, osx, sun
