Cursor Ads

Hits: 1,551

Description: A Cursor Ad generated by the Cursor Ad Generator software gets your visitor's instant and full attention and is guaranteed to stand out and be noticed. Your visitors can't help but to see and interact with your Cursor Ad as it follows their every move!

Cursor Ads load inside of an iframe window and are dynamically positioned over the rest of the page so that it's always on top. Since you can load any type of URL in an iframe, you can feature any web page of your choice in a Cursor Ad, such as links to web pages that you want people to visit, your email list sign-up form, a download link for your free ebook or software, important messages that you want to make sure people notice and read, the same content that you normally load in a pop-up window (while avoiding Popup Blockers since Cursor Ads cannot be blocked by them), or any HTML content of your choice... It's all up to you!

Set the width, height, and border styling for the Cursor Ad. Choose any size width and height (in pixels) and any border color along with any one of multiple border styles and thickness.

Plus, since Cursor Ads are an actual part of the page that appear over the rest of the page and are not opened in a separate browser window, they cannot be blocked by Popup Blockers. Cross-browser compatible, it will work on IE 5.5 or greater and late version Mozilla browsers such as FireFox.

MASTER Resale Rights Included, so you can make money reselling it!
