Secure Credit Card Processing

Hits: 2,608

Description: Now updated, the configuration is now even easier to set up! The simplest way to collect credit card payments over the web, no need for third party like Paypal or other. Saving Credit Card details into a database is a potential nightmare, what if someone hacks your site and strips your database?

This collection of scripts comes with complete simple step by step instructions for setup.

It stores half the information in a database, and the other half is sent via email, so only with the email and database access can the full information be rebuilt. There is a simple configuration file to customise it for your site.

Exactly what I was looking for, May 10th, 2005

Reviewed By: KenRobinson

I run seminars and needed to be able to collect registrations with credit card payments online.

This script was simple to set up, with great instructions. I only had one question which was because I wanted to add some fields. I emailed Mark the author, and he had all the answers for me within 15mins of me sending the email.

This is my best experience so far using a third party script. Well Done.

One of a kind, May 15th, 2005

I looked around quite a bit for a script that would take CC details so I could process payments offline. There doesn't seem to be any other script like this around. Mark's script does exactly what is required of it. My client needed this for his website and I was able to provide it for him and customise the script into the look of the site. With a bit of additional coding I was able to add a few more fields. I got great support from Mark too regarding queries I had about CC details and security using the script.

Just what I was after, May 16th, 2005

Just what I was after for online credit card payments for my site. Well written script that is very easy to set up and performs exactly as it is supposed to. Gave me what I was after and gives my clients that feeling of extra security when they purchase online. Good script well done.5*'s

This little script saved me days of mucking around. It was very well commented too, which made it easy to customize.

You won't find an easier way to collect credit card payments over the web than this.

By the way, have you thought about encrypting the email? That is the only way it could be made more secure, even though the email only has half the info anyway, so not really necessary I guess.
