Ultimate Gigs

Hits: 2,891

Description: Ultimate Gigs is an open-source Gig listing program written using PHP and MySQL. The program is designed to allow bands to post details of upcoming gigs on their website, without having the hassle of deleting gigs after they happen.

The focus of the project is on customisability, not only for the way the interface looks, but also in the program itself. Ultimate Gigs is released under the MIT Licence.

Current Feature List:

- *Password-protected admin panel
- *Easy to use interface
- *Easy customisability
- *Add new gigs
- *Edit or delete existing gigs
- *Gigs are automatically removed from the display page after they happen
- *Support for listing prices as "Free" or "To Be Confirmed"

Planned additional features:

- *Easier and cleaner install process
- *Customisable template for gig display page
