DatePickerControl

Hits: 8,914

Description: Features

- * Fully JavaScript
- * Automatic input control conversion with a single attribute in the input tag, or using a special id attribute. For example:
<input type "text" name="edit1" id="edit1" datepicker="true">
and that's all!
- * Multiple date formats.
- * Layered calendar, without annoying pop-up windows.
- * Mouse and keyboard navigation.
- * Variable first day of week.
- * Many config params.
- * CSS support.
- * GPL License.

Works with Mozilla family and IE.
