Free Flash MP3 Music Player

Hits: 24,439

Description: Hoover Web Design's Free Flash Music Player automatically starts and plays the first song, when it goes through all of the tracks it starts over. The track title scrolls from the right to the left as long as the track plays. If you switch tracks the new track title scrolls. There is also a time display for the tracks.

Knowledge of Macromedia Flash is not necessary and the Flash program is not required. The music player is updated via simple text files. Great for beginners or those needing a quick Flash solution to add music to their website.
