1touch Light

Hits: 17,678

Description: 1touch is an ASP component for on the fly manipulation of textual contents. 1touch make it ideal for usage wherever dynamic contents are entered, either by the site owner / author or by the visitors on the site.

If you are an ASP developer and use a database such as MS-Access (tm), external text files to store data, or even straight forward form handling - you need 1touch.

1touch will automatically format text originally stored in a DB field, text file or form collection to make it more understandable and visitor friendly .

You can customize the effects of 1touch and choose where, when and how to use 1touch.
