CubeSecurity

Hits: 815

Description: CubeSecurity is a complex solution that is designed to prevent an unauthorized using of text and graphical elements (in other words "grabbing") from your web-pages (hyper-text pages). If you need to protect your content from copying, saving to the disk, printing or any other form of unauthorized using - this product is the ideal solution for you! You can choose types of protection to use and easily customize them. The program will show what browsers will correctly display the encrypted page.

This product consists of the main application and functional modules to provide different document encrypting methods. We are constantly improving our encryption modules and creating new modules. Please do not forget to check our site for new CubeSecurity modules.

Resource Specifications
