PowerWEB LiveControls for ASP.NET

Hits: 736

Description: PowerWEB LiveControls for ASP.NET is a suite of 20 Web Controls that allow you to update selected form elements from code-behind without refreshing (flashing) the entire page. They mimic many standard Microsoft controls, but allow you to manipulate other controls or return data to the client without disrupting the user experience with annoying full-page refreshes. Windows-like mouse, key, and click events that are available from code-behind. The controls are cross-browser compatible with no security warnings. Here are a few of the controls you'll receive in your suite: LiveTimer, LiveGrid, LiveListBox, LiveDropDownList, LiveMessageBox, LiveTextBox, LiveButton. Check out our website for a complete listing of the controls that are included in the suite.
