PAWS - PHP AUTOMATIC WEB SITE

Hits: 9,188

Description: The goal of this project is to develop a program allowing a user to create a dynamic website automatically.

It can be used as a personal blog or a community portal, it contains a News, articles, downloads, discussion board, links, images and surveys modules(...).

The key word of this project is simplicity.

The installation part is completely automatic. You just need a Mysql Database and a server with PHP. The program will create all the tables necessary.

Resource Specifications
