NeedSecure Pro

Hits: 6,729

Description: NeedSecure Pro is a first class tool enabling you to easily password protect any directory on your web site with .htaccess and .htpasswd files. It has useful member management opportunities. The script is the ultimate protection solution for your website at a reasonable price. With NeedSecure Pro you can allow / deny access to any protected directory on your web site, change directory names to virtual names, manage the protected directories in the way you like, add new users to protected directories automatically, send mass newsletter to all registered users, edit language files and e-mail templates, edit / remove / suspend member accounts, temporarily disable new registrations, search member account by username, real name or email and much more. The script has a user-friendly installation, which requires no additional programming or configuration. FREE installation and FREE support included.

This script is an incredible deal! I will certainly recommend it to anyone who needs this type of thing. The help and support they gave me was top class and that made all the difference. I am going to put a link on my site for their company as I could not have had better advice and support.

Great app, Jun 23rd, 2005

It has been 2 weeks since I had Needsecure installed on my web site, and things are running flawlessly. I have protected a wealth of directories (each with various users), setup (and protected) a secondary intranet and customized all of the email announcements to suite my own needs. This is by far the easiest interface I have had to work with in several years. I am really enjoying not having to SSH in to the server and either PICO or VI create my htaccess and htpasswd files my self; and my clients really love being able to control their own passwords without me having to enter them manually.

I had to have the programmers at Needsecure install the scripts (my web hosting provider is a bit protective of of their servers and their own scripts have a way of preventing anything from being 100% smooth), and since I managed to screw up my directories once (again my fault), but each time I contacted Needsecure I received a email back from the sales/support saying they would jump right no it - and within 6 to 18 hours everything was ready to go again. I have always been a little leery of email tech support, but these guys were right on the ball, and fixed everything I broke in record time.

The only thing I can add is - if you are looking for a secure method to transfer information and data being you and your clients, through your web site, this is it - period.

I have installed this software onto my website to control the members login. This is a first class product and very easy to understand even for a beginner like myself. One of the most impressive things about this software is the technical support you are given. This is without a doubt one of the most efficient and easy to deal with Companies that I have ever dealt with. If you are thinking of buying secure software choose Needsecure you will not be disappointed. Thank you very much Guys.

I think I'm being scammed!!!, Dec 31st, 2007

I paid for this product last night and never received a download link. Then I wrote to customer support and sales for help and only got back auto-responders, and no one has sent me any actual response. It's been a full business day for them and still no answer!

I read all the glowing reviews of their great service – maybe they spammed these themselves - so far I think these guys are a total ripoff! I've paid my money and received nothing!
