CactuShop

Hits: 5,717

Description: CactuShop is an ASP shopping cart system comprising .asp scripts and a choice of MS Access, MS SQL or MySQL database. Its the only major ASP cart to feature the latest W3C standards compliant code (XHTML 1.0 strict). Cactushop features an advanced "skinning" system to enable a visual designer to create or edit the skin in dreamweaver or frontpage, without having to edit any ASP pages. The software is designed with SEO (search engine optimization) in mind: - latest W3C compliant HTML - google sitemap - SEO friendly URLs (PRO Version). v6 of Cactushop now features a setup routine to make installation even easier. Just copy the files to your website, configure the database connection (if required) and then go to the setup script and follow the wizard. Advanced features for handling downloadable products (skips shipping charges), advanced tax (including zero rating EU orders after validating the EU vat number given by the customer), customer groups, group pricing, etc.

When tested (MS SQL version) with a lot of items and several people using the site, performance was terrible... After reviewing the code, I found lot of amateur mistakes... It is obvious that this application was not well coded which is the reason for its scalability problems. If purchasing this product, keep in mind that you may have to replace it if your store is actually successful.
