JODPIE Bar

Hits: 1,050

Description: JODPIE Bar is a remotely hosted script that dynamically provides live Open Directory data through an elegant programming solution based on the combination of server-side scripting (PHP) and client-side scripting (JavaScript). JODPIE Bar is pure javascript you can embed it in any web page, even static HTML pages.

JODPIE Bar is customizable and is designed to fit in a little column of web page display; the script provides a partial and modified presentation of ODP data using an on the fly randomizer. Links are displayed using thumbshots provided by Thumbshots.org.

With this script it's possible to embed live Open Directory data in a web page just in seconds; after inserting few lines in a section of a web page and live Open Directory data will be displayed!

JODPIE Bar has been developed having in mind blogging platforms; remotely provided html is as simple as possible to integrate with all html designs. The script works fine with most blogging platforms, mainly on sidebar and run transparently with any theme.
