Centova Instant Messenger

Hits: 7,012

Description: Centova Messenger is a full-featured instant messaging application that is comparable in capabilities to many desktop IM clients. It offers the "look and feel" of a typical themed desktop instant messenger, but runs entirely from the user's web browser.

Building on the strengths of the Jabber®/XMPP Protocol, Centova Messenger is capable of interacting with many of the most common third-party instant messaging networks on the Internet, including the MSN®, ICQ®, AIM®, and Yahoo!® networks (depending on your Jabber®/XMPP Server configuration).
