WSN Forum

Hits: 3,417

Description: WSN Forum is ideal for the ambitious forum admin, designed to allow maximal customization and extensibility. It includes an extensive suite of features, including an illiteracy detector and many other ways to track and prevent undesirable posts and members. The toplists allow flexible display of data, and any number of new fields can be added. Includes a chat room, shoutbox, instant messaging, quotes system and various other options which you'd normally have to find an add-on for, which can be easily turned on or off from the switches area.

offers a lot more than one can expect, Jun 30th, 2005

Reviewed By: allsciences

Really it's more than one can expect of a forum script. Lot of features, highly customizable to meet each site needs and formats. Support is excellent. It can be integrated into the other series of WSN scripts (like the excellent WSN Links) and scripts of other companies too. Author is continuing implementing users suggestions. I recommend to visit the support forum of all WSN script series and decide.

A LOT of useful features., Apr 11th, 2007

I recently began using WSN Forum, and I have been very impressed with it.

WSN Forum is perfect for webmasters who wish to integrate their forum with a pre-existing PHP-based website. WSN Forum can easily be integrated into Mambo's Portal system or even PHP-Nuke.

What makes WSN Forum so unique is its ability to easily be customized.

I definitely recommend that you consider using WSN Forum if you are planning on installing a PHP-based forum on your website.
