SmartPPC Pro Image Search Plugin

Hits: 1,157

Description: You can give your users new service: Image Search. Image Search plug-in will allow your users to make easy search for image files of the following formats: JPEG, GIF, PNG.

Image Search plug-in gets results from Google and Yahoo in HTML format. Then it parses those using fast parsing techniques, and shows the result to a user in compliance with the given design.

As a result you'll receive the page with thumbnails of the images sorted by relevance.

To go to the page where picture is located, you must click on the thumbnail.

For every image file in the list you can see following information: file name, file size, type of the file, url of the page

where this picture is located. Image Search Plug-In is fully compatible with SmartPPC Pro search engine and can be added at any time.

Resource Specifications

Platform(s):	linux, windows, freebsd, sun
