Paessler URL Recorder

Hits: 752

Description: Paessler URL Recorder helps to find out the URLs and POSTDATA strings that a user sends to a web server while surfing a sequence of URLs. It works like a standard web browser, whereby you can enter a URL at the top and click "Go". Then you can use the mouse to surf through the sequence you want to record. While you are accessing one page after the other, the URL and POSTDATA are stored in a list.

Resource Specifications

Version:	1.0
Platform(s):	windows
Date Added:	Mar 31st, 2005
