# Bizzar Web Server

Hits: 10,230

**Description:** Want to run a web server at home on your Windows XP workstation? Bizzar.Server uses the incredible open source packages from Apache, PHP, MySQL, and phpMyAdmin; compiled into an installation executable which is already preconfigured for usage and automatically sets up start menu shortcuts. As always, everything I've done is supported at my forum for free and this download, though it weighs in at 16 megs, is sure to be the quick and easy web server you've been looking for!

## Resource Specifications
