## FCKNuke

Hits: 1,081

**Description:** FCKNuke puts a WYSIWYG HTML editor into PHP-Nuke in many modules. Security is maintained by restricting what HTML the average user can add while still allowing the site admin to enter ANY HTML.

FCKNuke is built on FCKeditor. This editor will work in IE 5.5+, Firefox 1.0+, Mozilla 1.3+ and Netscape 7+. it will run on Windows, Linux, or MAC.

FCKNuke requires no changes to PHP-Nuke's Database. Minimal changes were made to files. This will help reduce the possibility of conflicts with other additions.

Finally FCKNuke is easily upgradeable as new versions are release

### Resource Specifications
